

## Modularization using Lattice of Concept Slices

Done by  
IMT2017022 Cherish Chowdary  
IMT2017028 Mohammed Khalid  
IMT2017037 Sanjay Kumar

### Possible Improvements:

- Since they have implemented the control Flow Graph a lot of flow based metrics could be worked on further.
- They have implemented the CFG for a subset of C Language, they can try to include additional elements of language such as switch statements into their implementation.
- The Study done had a lot of standard prerequisites concepts for quality analysis, they can improve their study by focussing on various applications of each of the elements in the prerequisites.
- The Paper that they presented only focuses on modularizing C program, they can try to extend their study by researching other programming languages which are object oriented like Java or python.
- The report was made easier to understand since lot of the concepts were explained with the help of examples and proofs were given in the report with helped us in understanding
